Octopress Changelog

2.0

- Now based on [mojombo/jekyll](#)
- Sports a semantic HTML5 template
- Easy theming with Compass and Sass
- A Mobile friendly responsive (320 and up) layout
- Built in 3rd party support for Twitter, Google Plus One, Disqus Comments, Pinboard, Delicious, and Google Analytics
- Deploy to Github pages or use Rsync
- Built in support for POW and Rack servers
- Beautiful [Solarized](#) syntax highlighting
- Super easy setup and configuration

New Plugins, Filters, & Generators

- **Gist Tag** for easily embedding gists in your posts
- **Pygments Cache** makes subsequent compiling much faster
- **Include Code Tag** lets you embed external code snippets from your file system and adds a download link
- **Pullquote Tag** Generate beautiful semantic pullquotes (no double data) based on Maykel Loomans's [technique](#)
- **Blockquote Tag** makes it easy to semantically format blockquotes
- **Category Generator** gives you archive pages for each category
- **Sitemap.xml Generator** for search engines

1.0

- **No longer supported.**
- Jekyll Matured, but Henrik's Jekyll fork did not.
- Thanks for all your pull requests, I learned a lot.
